CONTENTS:

1	Cache	3
2	Flask	5
3	Mail	7
4	Direct MusicBrainz access	9
4.1	MusicBrainz Artist	9
4.2	MusicBrainz Editor	9
4.3	MusicBrainz Event	9
4.4	MusicBrainz Label	9
4.5	MusicBrainz Place	9
4.6	MusicBrainz Recording	10
4.7	MusicBrainz Release	10
4.8	MusicBrainz Release Group	10
4.9	MusicBrainz Work	10
5	Ratelimit	11
6	Indices and tables	13

BrainzUtils is a set of python tools used in projects by the MetaBrainz foundation.

CACHE

The cache module provides an interface to redis to store items temporarily

FLASK

The Flask module provides a Flask application with a few sensible defaults for MetaBrainz projects

MAIL

The mail module provides tools for sending emails

DIRECT MUSICBRAINZ ACCESS

The `musicbrainz_db` module provides wrappers around `mbdata` to load musicbrainz entities directly from a musicbrainz database.

4.1 MusicBrainz Artist

For loading an artist from musicbrainz

4.2 MusicBrainz Editor

For loading an editor from musicbrainz

4.3 MusicBrainz Event

For loading an event from musicbrainz

4.4 MusicBrainz Label

For loading a label from musicbrainz

4.5 MusicBrainz Place

For loading a place from musicbrainz

4.6 MusicBrainz Recording

For loading a recording from musicbrainz

4.7 MusicBrainz Release

For loading a release from musicbrainz

4.8 MusicBrainz Release Group

For loading release group from musicbrainz

4.9 MusicBrainz Work

For loading work from musicbrainz

RATELIMIT

The ratelimit module provides tools for limiting access to an API based on IP address over a certain amount of time. The limits are stored in redis.

INDICES AND TABLES

- `genindex`
- `modindex`
- `search`
